

# ABSTRACT

A subject of the invention, in all possible isomer forms as well as their mixtures, is the compounds of formula (I):

in which

either R<sub>1</sub>: H or CH<sub>3</sub> and

R<sub>2</sub>: cyclohexyl substituted by an amine, a (CH<sub>2</sub>)<sub>b</sub>-C≡N radical or R<sub>1</sub> and R<sub>2</sub> together with the nitrogen which carries them form a ring with 3, 4 or 5 carbons optionally substituted by an amine

R<sub>3</sub>: hydrogen, methyl or hydroxyl

R<sub>4</sub>: hydrogen or hydroxyl

R: represents a linear, branched or cyclic chain

T: hydrogen, methyl, CH<sub>2</sub>CONH<sub>2</sub>, CH<sub>2</sub>C≡N, a (CH<sub>2</sub>)<sub>2</sub>NH<sub>2</sub> or (CH<sub>2</sub>)<sub>2</sub>Nalk<sup>+</sup>X<sup>-</sup> radical, X halogen and alk alkyl

Y: hydrogen, hydroxyl, halogen or OSO<sub>3</sub>H,

W: H or OH,

Z: H, CH<sub>3</sub>.

The compounds of formula (I) have antifungal properties.
